

Dylan Clement Butelho

New York, USA | +1 (315) 491-1371 | dylanbutelho@gmail.com | Portfolio | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Computer Science graduate student at Syracuse University with experience in full-stack development, machine learning, and scalable systems. Skilled in Python and JavaScript, with hands-on experience building data-driven applications and working with AWS.

SKILLS

• Languages:	Python, Java, C, C++, JavaScript, SQL
• Web Framework & Libraries:	Flask, FastAPI, ExpressJS, NodeJS, NextJS, ReactJS, Django, Celery, GraphQL
• Data Science & Machine Learning:	Pandas, NumPy, Scikit-Learn, Matplotlib, PyTorch, TensorFlow, LangChain
• Databases & Data Warehousing:	MySQL, PostgreSQL, SQL Server, MongoDB, Supabase, Redis
• Cloud & Infrastructure:	AWS, Cloudflare
• DevOps & CI/CD:	Docker, Jenkins, Kubernetes, Git, GitHub
• Data Visualization & BI:	Tableau, Power BI, Excel
• Automation & AI Workflow:	n8n, CrewAI, RAG

CERTIFICATIONS

• Amazon Web Services (AWS):	(In Progress) Developer – Associate
• Cisco:	Python Essentials I & II

EXPERIENCE

Application Developer <i>iConsult Collaborative</i>	Syracuse, NY January 2026 - Present
- Developed and maintained cross-platform web and mobile applications end-to-end for internal and external clients, owning the full software development lifecycle from system design and architecture through testing and deployment. - Engineered scalable backend systems, RESTful APIs, and responsive front-end interfaces using multiple frameworks, enabling real-time data processing and seamless cross-platform performance in an agile development team.	
Software Engineer <i>Vervali Systems</i>	Mumbai, India January 2024 - July 2024
- Developed and engineered software solutions across multiple platforms and domains, leveraging diverse tools and technologies to build scalable systems, streamline data pipelines, and optimize CI/CD pipelines and deployment workflows. - Designed and implemented data migration, integration, and infrastructure solutions using scripting, automation, and structured data modeling, ensuring data integrity, system reliability, and enabling data-driven decision making. - Built responsive, scalable applications and automated data and DevOps workflows across multiple client domains, enhancing cross-platform usability, operational efficiency, and analytical capabilities through continuous integration and delivery practices.	

PROJECTS

H1B JobPilot — AI-Powered Job Search & Visa Sponsorship Intelligence Platform (In Progress) Building a full-stack AI platform using Next.js, FastAPI, PostgreSQL, Redis, and Claude AI API to ingest 500,000+ public USCIS/DOL H1B records via an automated ETL pipeline, deliver AI-powered ATS resume optimization, and aggregate jobs from public career pages with real-time H1B sponsorship likelihood scoring, targeting deployment on Vercel and Railway with 20+ async endpoints and JWT authentication.
AI-Powered Plant Disease Detection & Diagnosis System Engineered an end-to-end deep learning pipeline using CNN-based image classification with data preprocessing and augmentation to accurately detect plant diseases from leaf images and recommend treatments for agricultural professionals.
Real-Time IoT Environmental Monitoring & Air Quality Classification System Developed a real-time IoT environmental monitoring system applying supervised (Random Forest) and unsupervised (K-Means) learning on sensor data to classify air quality levels, identify pollutant patterns, and generate actionable insights through data visualization.
Collaborative Filtering and Market Basket Analysis for Product Recommendations Designed a data-driven recommendation engine for an e-commerce platform using collaborative filtering and association rule mining to analyze user purchase behavior and deliver personalized product recommendations, improving product discovery and engagement.
Scalable E-Commerce Platform with Secure Authentication Built a full-stack e-commerce web application with secure user authentication, product catalog management, shopping cart functionality, and checkout system using a modern JavaScript framework and NoSQL database

EDUCATION

Syracuse University Master of Science in Computer Science	Syracuse, NY August 2024 - May 2026 (Expected)
Relevant Coursework: Data Structures & Algorithms (DSA), Natural Language Processing (NLP), Computer Architecture, Operating Systems, Artificial Intelligence (AI), Machine Learning (ML), Database Management Systems (DBMS), Cryptography & Network Security, Automata & Formal Methods, Agentic AI	
University of Mumbai Bachelor of Engineering in Information Technology	Mumbai, India August 2019 - May 2023
Relevant Coursework: Computer Networks (CN), Network Security, DevOps, Data Mining & Business Intelligence (BI), Big Data Analytics, Cloud Computing, Blockchain, Internet of Things (IoT), Robotics
